Cont. on SZ 23 93

BARTON-ON-SEA, Hants.

LAJ. garvie (1999) M Mag 757-9. Yellowish
botry. efflor. on low cliffs of greyish
siltstones of Barton Beds (Upp. Eocene)
E of Barton-on-Sea; areas a few cm²
to ~100 m² (!) Light- to orange-yellow
when wet; whitish- to light-yellow
when dry. Silky lustre, micro-needles
Result from pyrite oxidation +
Cl⁻ from sea water & are
sideronatrite e/or metasideronat.
Dry sidero- readily converts
reversibly to metasidero-. XRD

~ 25 922

also reveals traces natrojarosite,
no tamarugite
